

## ADMISSIONS COMMITTEE MINUTES

11/4/20 meeting time 2:00pm

Absent: Orlando Justo

Notes taken by Ben Powell

Vasquez: big issues with students knowing how to navigate and where to go in order to register and enrollment

Manita: science dept advising practices and misadvising into science courses that they do not belong in

-Powell: is there consistency across practices, that isn't held together with tape and glue as a practice

-Cheryl: In ALL there are still issues with the index and how students are being sent around, still a LOT of uncertainty around what the index means and how it works, also concerned about consistency around the advising process---> we do not want each

-Cheryl: Starfish issues, are they working with advisors? Is there any other way to provide info back to the faculty in order to understand whether the intervention is working or not? ---> is there a way to make the reach out from the advisor to the faculty to help coordinate

-Glenny: is there a data point about whether students are being more successful in synch vs asynch classes

-Cheryl: is there a way to record and provide the video for students to use in blackboard or whatever mode, instead of a certificate can we provide something that is more useful for the students than just the certification---> workshop tutorials? Maybe match it with a lesson plan and then use it as a model

\*\*we all agreed to take the next few weeks to mull over our meeting and come up with some objectives either alone or in conjunction with other departments at BMCC\*\*

We adjourned at 3:00pm
